

Quantum Information Processing

Dieter Suter

June 12, 2025

Contents

1	Introduction and survey	11
1.1	Information, computers and quantum mechanics	11
1.1.1	History of computing	11
1.1.2	General purpose digital computers	11
1.1.3	The digital revolution	11
1.1.4	Moore's law	13
1.1.5	Emergence of quantum behavior	13
1.1.6	Energy dissipation in computers	14
1.2	Quantum computer basics	15
1.2.1	Quantum information	15
1.2.2	Quantum communication	16
1.2.3	Basics of quantum information processing	17
1.2.4	Decoherence	18
1.2.5	The network model	19
1.2.6	Physical implementation	19
1.3	History of quantum information processing	21
1.3.1	Initial ideas	21
1.3.2	Quantum algorithms	22
1.3.3	Potential Benefits and Risks	22
1.4	About this course	23
1.4.1	Literature	23
1.4.2	Online resources	23
2	Physics of Computation	24
2.1	Physical laws and information processing	24
2.1.1	Hardware representation	24
2.1.2	Physical laws and ultimate limits	24
2.1.3	Quantum vs. classical information processing	25
2.2	Limitations on computer performance	26
2.2.1	Switching energy	26
2.2.2	Entropy generation and Maxwell's demon	26
2.2.3	Reversible logic	28
2.2.4	Reversible gates for universal computers	30
2.2.5	Processing speed	30
2.2.6	Information content and speed	31
2.2.7	Additional details	32
2.3	The ultimate laptop	32
2.3.1	Processing speed	32
2.3.2	Maximum storage density	33

2.3.3	Monoatomic gas	33
2.3.4	Massless particles	34
2.3.5	Parallel / serial operation	34
3	Elements of Classical Computer Science	36
3.1	Bits of history	36
3.2	Boolean algebra and logic gates	36
3.2.1	Bits and gates	36
3.2.2	2-bit logic gates	37
3.2.3	Minimum set of irreversible gates	38
3.2.4	Minimum set of reversible gates	39
3.2.5	The CNOT gate	39
3.2.6	The Toffoli gate	40
3.2.7	The Fredkin gate	40
3.3	Universal computers	41
3.3.1	The Turing machine	41
3.3.2	Example	42
3.3.3	The Church–Turing hypothesis	42
3.4	Complexity and algorithms	42
3.4.1	Complexity classes	42
3.4.2	Hard and impossible problems	43
4	Quantum Mechanics	45
4.1	History	45
4.1.1	Before the quantum revolution	45
4.1.2	Open questions	45
4.1.3	The first quantum revolution	45
4.1.4	Is quantum mechanics weird?	46
4.1.5	Is quantum mechanics relevant?	46
4.2	General structure	46
4.2.1	Spectral lines and stationary states	46
4.2.2	Vectors in Hilbert space	47
4.2.3	Operators in Hilbert space	48
4.2.4	The Schrödinger equation	48
4.2.5	Time evolution	49
4.2.6	Measurements	49
4.3	Quantum states	50
4.3.1	The two-dimensional Hilbert space: qubits, spins, and photons	50
4.3.2	Hamiltonian and evolution	51
4.3.3	Vector representation	52
4.3.4	Coupling to environment	53
4.3.5	Entangled with environment	53
4.3.6	Density operator	54
4.3.7	Product states	54
4.4	Quantum vs. classical	55
4.4.1	Entanglement and mixing	55
4.4.2	Bell states	56

4.4.3	Bloch sphere	56
4.4.4	Purity	57
4.4.5	Time-dependence	57
4.4.6	EPR correlations	58
4.4.7	Bell's theorem	59
4.4.8	The quantum mechanical prediction	59
4.4.9	The Aspect experiment	60
4.4.10	CNOT as copy operator	61
4.4.11	The no-cloning theorem	61
4.5	Measurement revisited	62
4.5.1	Quantum mechanical projection postulate	62
4.5.2	The Copenhagen interpretation	63
4.5.3	Von Neumann's model	64
4.5.4	Discussion	65
4.6	Entanglement measures	66
4.6.1	General requirements	66
4.6.2	Entropy of entanglement	66
4.6.3	Concurrence : Definition	67
4.6.4	Generating entanglement	67
4.6.5	Concurrence : Properties	69
4.6.6	Tangle	69
4.6.7	Positive Partial Transpose (PPT)	70
4.6.8	Examples	71
4.6.9	Decay of entanglement	71
4.6.10	Quantum discord	72
4.6.11	Entanglement witnesses	74
5	Quantum Bits and Quantum Gates	76
5.1	Single-qubit gates	76
5.1.1	Introduction	76
5.1.2	Example gates	76
5.1.3	General rotations	77
5.1.4	Composite rotations	78
5.2	Two-qubit gates	79
5.2.1	Controlled gates	79
5.2.2	Composite gates	80
5.2.3	3-qubit gates	81
5.3	Universal sets of gates	82
5.3.1	Choice of set	82
5.3.2	Unitary operations	82
5.3.3	Two qubit operations	83
5.3.4	Approximating single-qubit gates	84
5.4	Resonant electromagnetic fields	85
5.4.1	Radio frequency field	85
5.4.2	Rotating frame	86
5.4.3	Equation of motion	87
5.4.4	Evolution	88

6	Feynman' Contribution	90
6.1	Simulating physics with computers	90
6.1.1	Discrete system representations	90
6.1.2	Probabilistic simulations	91
6.2	Quantum mechanical computers	91
6.2.1	Simple gates	91
6.2.2	Adder circuits	92
6.2.3	Qubit raising and lowering operators	92
6.2.4	NOT and CNOT	93
6.2.5	Adder Hamiltonian	94
7	Errors and Decoherence	96
7.1	Motivation	96
7.1.1	Quantum vs. classical errors	96
7.1.2	Sources of errors	97
7.1.3	Characterization of errors	97
7.1.4	A counterstrategy	97
7.2	Errors and Decoherence	98
7.2.1	Phenomenology	98
7.2.2	Semiclassical perturbation	99
7.2.3	Ensemble average	100
7.2.4	Spin-boson model	101
7.2.5	Spin-spin model	102
7.2.6	Entanglement and mixing	103
7.2.7	Time dependence	103
7.2.8	Decoherence in large systems	104
7.3	Quality Measures	106
7.3.1	Distance and Fidelity	106
7.3.2	Process fidelity	107
7.3.3	Quantum state tomography	108
7.3.4	Quantum process tomography	109
7.4	Error correction	111
7.4.1	Basics	111
7.4.2	Classical error correction	112
7.4.3	Quantum error correction	112
7.4.4	Single spin-flip error	113
7.4.5	Error detection and correction	114
7.4.6	Continuous errors	115
7.4.7	Decoding	115
7.4.8	Phase errors	115
7.4.9	Projection errors	116
7.4.10	General single qubit errors	116
7.4.11	Perfect 5-qubit code	117
7.4.12	Stabilizer codes	118
7.4.13	Fault-tolerant computing	119
7.5	Avoiding errors	121
7.5.1	Robust operations	121

7.5.2	Robust sequences	122
7.5.3	Protection against decoherence	123
7.5.4	Decoherence-free subspaces	124
7.5.5	Information capacity	125
7.5.6	Example: spin qubits	126
7.5.7	Clock transitions	127
7.5.8	The quantum Zeno effect	128
7.5.9	Repeated measurements	129
7.5.10	Experimental example	130
7.6	Fighting Decoherence	131
7.6.1	Refocusing	131
7.6.2	Fluctuations	132
7.6.3	Dynamical Decoupling	133
7.6.4	Imperfections	133
7.6.5	Error compensation	135
7.6.6	Robust DD	135
7.6.7	DD for large systems	137
8	Quantum Algorithms	138
8.1	Quantum versus classical algorithms	138
8.1.1	Why Quantum?	138
8.1.2	Classes of quantum algorithms	139
8.2	The Deutsch algorithm: Looking at both sides of a coin at the same time	139
8.2.1	Functions and their properties	139
8.2.2	Example : one-qubit functions	140
8.2.3	Evaluation	141
8.2.4	The Deutsch algorithm	141
8.2.5	Many qubits	142
8.2.6	Extensions and generalizations	143
8.3	The Shor algorithm: It's prime time	143
8.3.1	Some number theory	144
8.3.2	Factoring strategy	145
8.3.3	The core of Shor's algorithm	146
8.3.4	The Classical Fourier transform	148
8.3.5	The quantum Fourier transform	149
8.3.6	Gates for the QFT	150
8.4	The Grover algorithm: Looking for a needle in a haystack	151
8.4.1	Oracle functions	152
8.4.2	The search algorithm	152
8.4.3	Geometrical analysis	153
8.4.4	Quantum counting	154
8.4.5	Phase estimation	155
8.4.6	Reading the Phase	156
8.5	Other algorithms	156
8.5.1	Gradient estimation	156
8.5.2	Image processing	157

8.6	Quantum simulations	158
8.6.1	Potential and limitations	158
8.6.2	Possible schemes	158
8.6.3	Simulated evolution	159
8.6.4	Examples	160
9	How to Build a Quantum Computer	161
9.1	Fundamentals	161
9.1.1	Terminology	161
9.1.2	History	161
9.1.3	The network model	162
9.1.4	Some existing and proposed implementations	163
9.1.5	Status and current trends	163
9.2	Requirements for quantum information processing hardware	165
9.2.1	DiVincenzo criteria	165
9.2.2	Qubits	165
9.2.3	Initialization	166
9.2.4	Initialization time	167
9.2.5	Decoherence time	168
9.2.6	Quantum gates	168
9.2.7	Frequency-domain addressing	169
9.2.8	Imperfections	170
9.3	Converting quantum to classical information	170
9.3.1	Principle and strategies	171
9.3.2	Repeated measurements through ancilla qubits	172
9.3.3	Example: Deutsch–Jozsa algorithm	173
9.3.4	Complete state information	173
9.3.5	Quantum state tomography	174
9.4	Alternatives to the network model	175
9.4.1	Local addressability	175
9.4.2	Cellular automata	176
9.4.3	Quantum cellular automata	176
9.4.4	QCA with 2 types of cells	177
9.4.5	One-way quantum computer	178
9.4.6	Example : CNOT	179
9.4.7	Adiabatic computation	180
9.4.8	Adiabatic factoring	180
10	Liquid-state NMR	182
10.1	Basics of NMR	182
10.1.1	System and interactions	182
10.1.2	Radio frequency field	184
10.1.3	Rotating frame	184
10.1.4	Equation of motion	185
10.1.5	Evolution	186
10.1.6	NMR signals	187
10.1.7	Resonance lines	188

10.1.8 Refocusing	189
10.2 NMR as a molecular quantum computer	190
10.2.1 Spins as qubits	190
10.2.2 Chemical shift	192
10.2.3 Coupled spin systems	192
10.2.4 Pseudo / effective pure states	194
10.2.5 Single-qubit gates	196
10.2.6 Two-qubit gates	197
10.2.7 Two-qubit gates with nonselective pulses	198
10.2.8 Qubit readout	199
10.2.9 Readout in multi-qubit systems	201
10.2.10 DiVincenzo's criteria	202
10.2.11 Scaling behavior	202
10.3 NMR Implementation of Shor's algorithm	203
10.3.1 Qubit implementation	204
10.3.2 Initialization	205
10.3.3 Computational steps	206
10.3.4 Readout	207
10.3.5 Decoherence	208
10.4 Spin chains	208
10.4.1 Quantum state transfer	208
10.4.2 Two- and three-body interactions	209
11 Trapped Ions and Atoms	211
11.1 Trapping ions	211
11.1.1 Ions, traps and light	211
11.1.2 Linear traps	212
11.2 Interaction with light	213
11.2.1 Optical transitions	213
11.2.2 Motional effects	214
11.2.3 Force from lasers	215
11.2.4 Laser cooling	216
11.3 Quantum information processing with trapped ions	217
11.3.1 Metastable qubits	217
11.3.2 Hyperfine qubits	218
11.3.3 Single-qubit gates	218
11.3.4 Two-qubit gates	219
11.3.5 Readout	220
11.4 Experimental implementations	221
11.4.1 Systems	221
11.4.2 Initial results	222
11.4.3 Two-qubit operations	223
11.4.4 Challenges	224
11.4.5 Scalability	224
11.5 Neutral atoms	225
11.5.1 Potential and force	225
11.5.2 Traps	226

11.5.3 Motional control	227
11.5.4 Gate operations	228
11.6 Interacting atoms in optical lattices	229
11.6.1 Particles in a periodic potential	229
11.6.2 Interactions between atoms	230
11.6.3 The Hubbard model	231
11.6.4 Experimental simulation: setup	232
11.6.5 Results	232
12 Solid State Quantum Computers	235
12.1 Spins in semiconductor structures	235
12.1.1 Spins in solids	235
12.1.2 ^{31}P in silicon	235
12.1.3 The qubit system	236
12.1.4 Qubit operations	237
12.1.5 Readout	238
12.1.6 Si/Ge heterostructures	239
12.1.7 Schemes with tunable qubit-qubit interactions	240
12.2 Spin centers	240
12.2.1 N@C60	240
12.2.2 Addressing and gate operations	241
12.2.3 Gated couplings	242
12.2.4 Single-Spin Readout	243
12.2.5 Rare Earth Ions	244
12.2.6 Photonic quantum memories	244
12.2.7 Nuclear spin storage	246
12.2.8 Molecular Magnets	246
12.3 Color centers in wide-bandgap semiconductors	247
12.3.1 The NV $^-$ -center in diamond	248
12.3.2 Initialization and readout	248
12.3.3 Nuclear spin interactions	249
12.3.4 Quantum memory	249
12.3.5 Single-spin readout	250
12.3.6 Optimizing the readout	251
12.3.7 SiC, Si $_3$ N $_4$	252
12.4 Superconducting systems	253
12.4.1 Basics	253
12.4.2 The Josephson effect	254
12.4.3 Charge qubits	254
12.4.4 Flux qubits	255
12.4.5 Transmon and Unimon	256
12.4.6 Gate operations	256
12.4.7 Connecting Qubits	257
12.4.8 Readout	258
12.4.9 Status of the field	258
12.5 Semiconductor qubits	259
12.5.1 Materials	259

12.5.2 Quantum Dots	259
12.5.3 Excitons in quantum dots	260
12.5.4 Electron spin qubits	261
12.5.5 Readout	261
12.6 Others	262
12.6.1 Majorana qubits	262
13 Photons for Quantum Information	264
13.1 Photons as qubits	264
13.1.1 Photons	264
13.1.2 Working with single photons	264
13.1.3 Linear optics quantum computing	266
13.1.4 Linear optics and measurements	267
13.1.5 Implementation	268
13.1.6 Integrated optics	268
13.2 “Quantum only” tasks	269
13.2.1 Quantum teleportation	269
13.2.2 (Super-) Dense coding	271
13.2.3 Quantum key distribution	272
13.2.4 BB84	272
13.2.5 Tests	273
13.3 A few bits of classical information theory	274
13.3.1 Measuring Information	274
13.3.2 Information content and entropy	275
13.3.3 Mutual information and the data processing inequality	275
13.3.4 Data compression and Shannon’s noiseless channel coding theorem	276
13.3.5 Data compression	277
13.3.6 The binary symmetric channel and Shannon’s noisy channel coding theorem	278
13.4 A few bits of quantum information theory	279
13.4.1 The von Neumann entropy	279
13.4.2 The accessible information and Holevo’s bound	281
13.4.3 Schumacher’s noiseless channel coding theorem	281
13.4.4 Classical information over noisy quantum channels	282
14 Appendix: Two spins-1/2: Singlet and triplet states	284
Bibliography	285
